

Who is the Dailycer?

With an annual production of some 75,000 tones, Dailycer is one of the largest manufacturers of breakfast cereals and cereal bars for private label and business-to-business in Europe. Their position as a market leader is the result of 20 years of continuous growth.

What are the Business Requirements?

Dailycer needed a robust and scalable solution to interconnect its sites with a VPN solution and a very strict SLA. A tailored master agreement was negotiated, with important credit notes for Dailycer in case of service's failure.

What is the Interoute solution?

Interoute's IPVPN solution was proposed with options to connect Dailycer's French, German and English sites on DSL, leased line and Ethernet technologies (6 sites).

Internet Central + firewall, Bluecoat, Message Labs, Remote Access and Voice were delivered to assure to Dailycer a complete telecom solution.

Why did Interoute win the contract?

Our solution was answering to all Dailycer's requirements from a technical point of view and also from a contractual point of view.
